

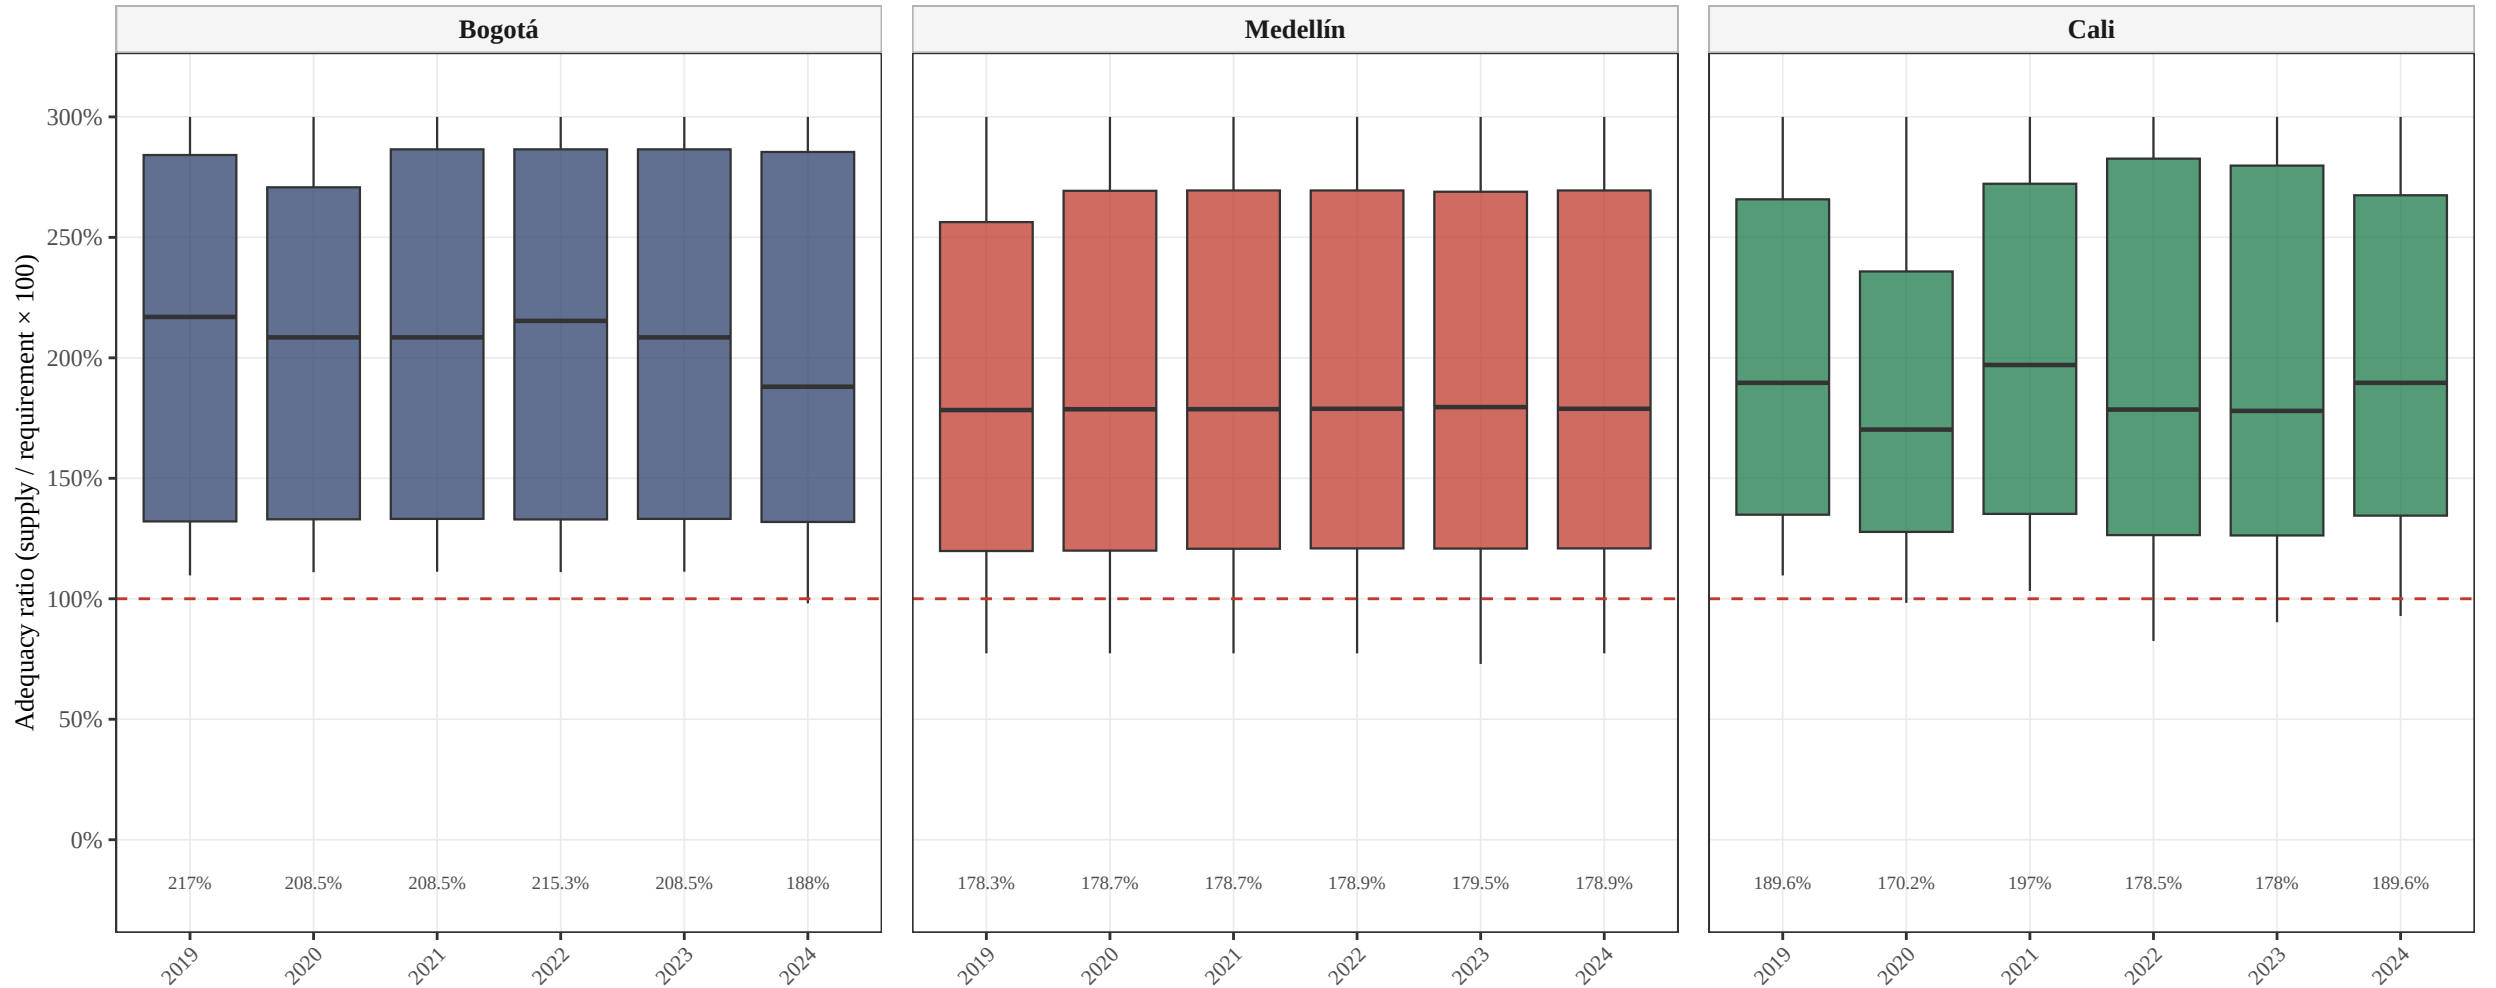

Figure 2C(iii). Annual distribution of nutritional adequacy ratios in the CoRD diet, 2019–2024

Each observation = mean annual supply / requirement $\times$ 100 for one nutrient–member combination. Red dashed line = 100% (minimum requirement). Numbers below x-axis = median ratio. Values capped at 300% for display.

Note: Adequacy ratio = mean annual CoRD supply / minimum requirement $\times$ 100 (CoNA 'Rest' column). Sodium excluded (maximum constraint). Box = IQR; whiskers = 1.5 $\times$ IQR; dots = outliers. CoRD = Cost of Recommended Diet; CoNA = Cost of Nutritional Adequacy.
