

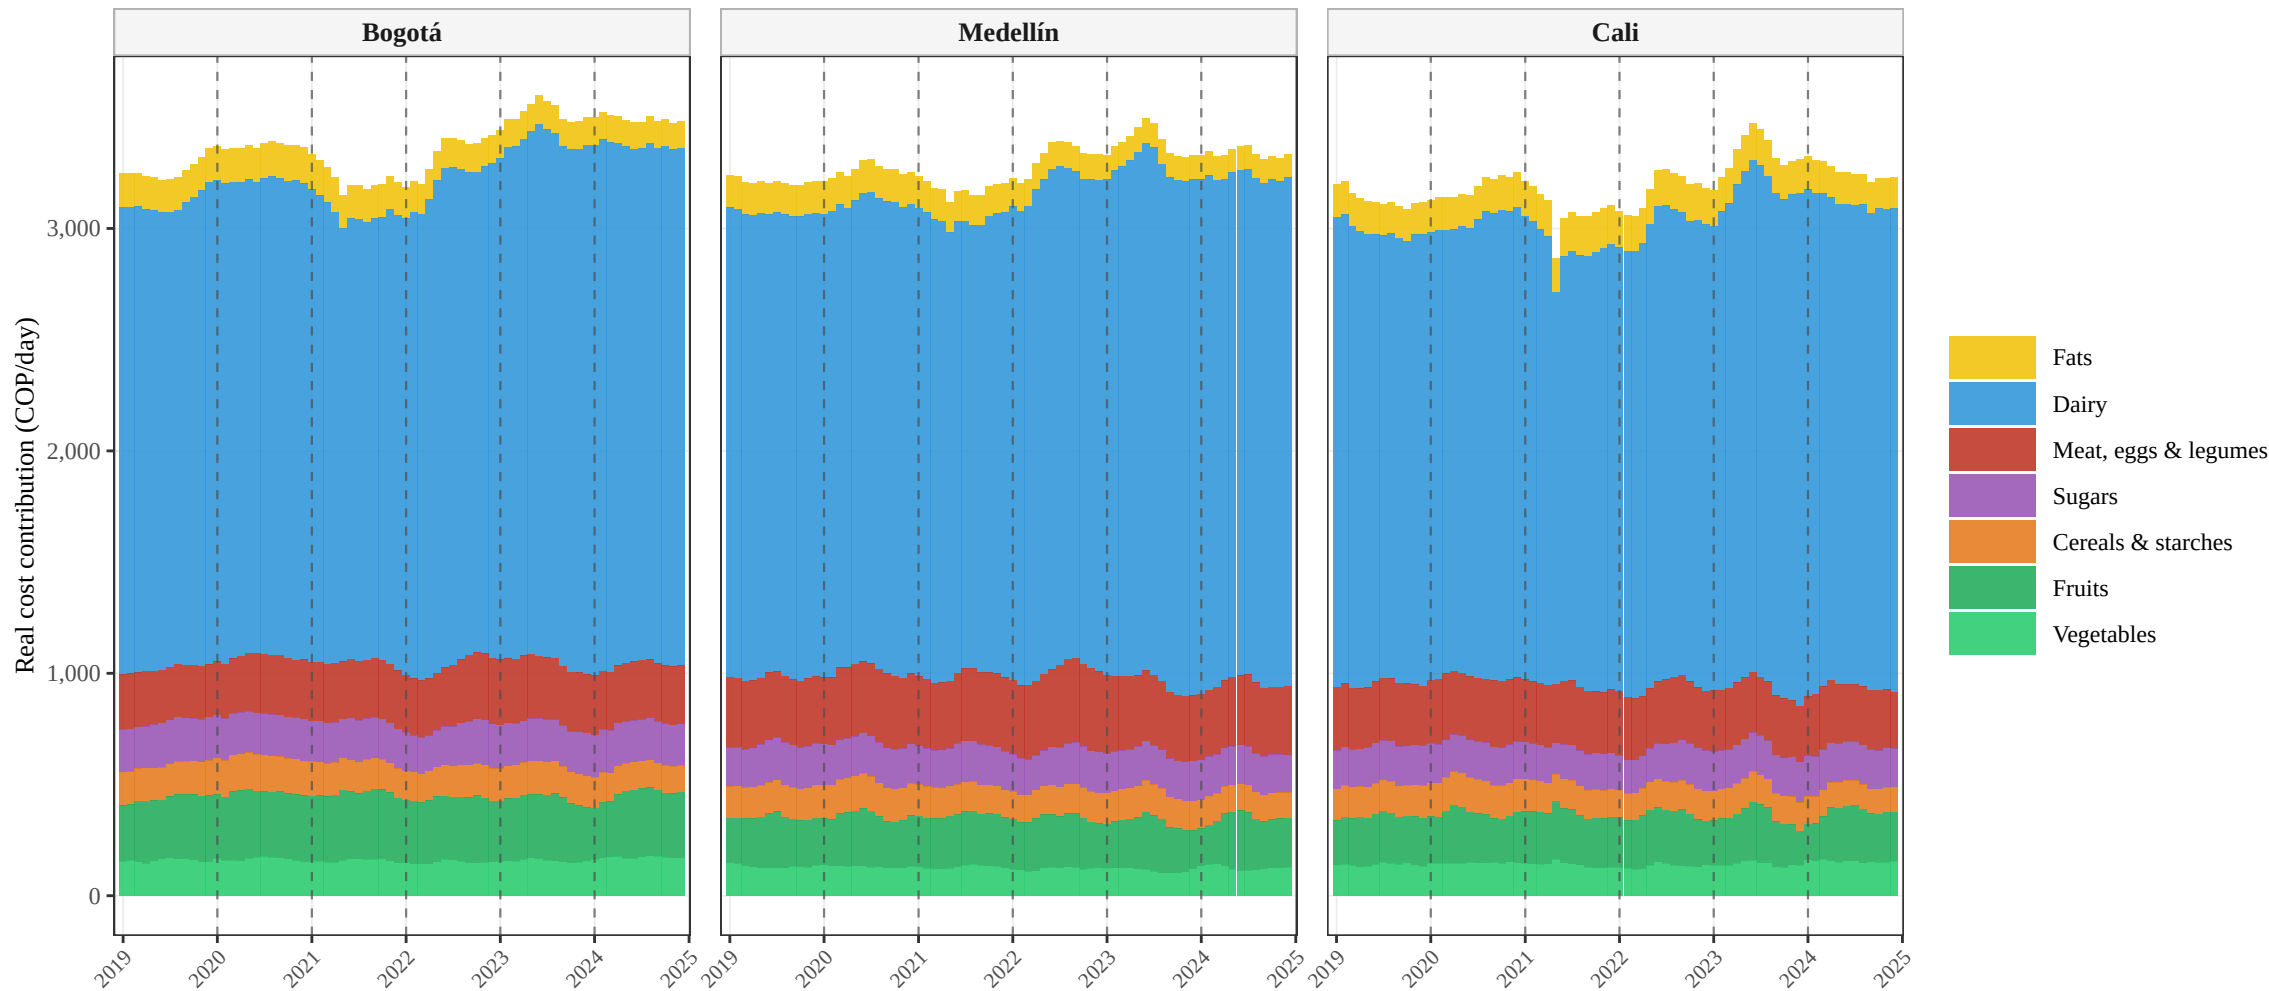

Figure 2C(ii). Monthly real cost contribution by GABA food group in the CoRD diet by city, 2019–2024

Real COP/day per member (base: December 2018). Unlike servings, cost shares shift with relative prices. Dashed vertical lines mark year boundaries.

Note: Cost contribution = real price per serving $\times$ number of servings. Fats and dairy dominate by servings but their cost share varies with local price dynamics. Real COP deflated by city-level food CPI (DANE División 01100000, base: December 2018).
