

Figure A. Mean contribution of core foods to total nutrient supply in the CoNA diet by household member and city, 2019–2024

Mean of monthly % contributions over 2019–2024, by household member and city. Only foods contributing =3% to at least one nutrient–member–city combination shown. Labels for contributions =5%.

Note: % computed as food contribution / total nutrient supply × 100 within each month, then averaged over the full period. Nutrients ordered by shadow price (SPE) magnitude (highest to lowest). Sodium excluded (see text). CoNA = Cost of Nutritional Adequacy.
